Subject: The future is coming, and it's Egg shaped?
Date: 08 April 2016 09:32:06

Hi folks

Some background on the "Egg" concept being developed by MH and Hauge Aqua in Norway. Not clear from this what the effluent treatment arrangements are but I imagine that there must be some means of sucking the faeces up the central pipe for disposal? The one story discusses a reduction in "environmental footprint" and in the last article that "the plant will attempt to collect particulate material".

This seems to me (assuming the concept is proven) to be an answer to so many of the growing issues around marine cage farming and if the concept is proven, to be squarely BAT.
